6 places for trees → 6 Groups

Planting hole; one spade deep; loosen the soil a second spade depth

Hammer in wooden post

Mix soil and activator

Cut off defective ; shorten big roots
 keep fine roots untouched

- **How to plant a tree ?** - Part 3 details -

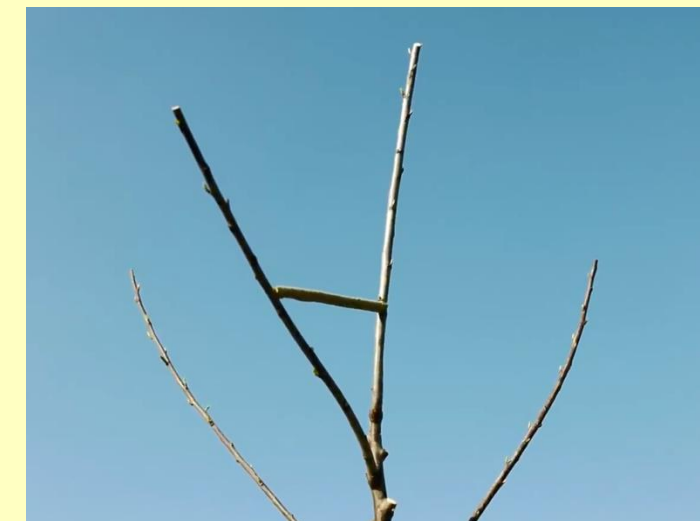

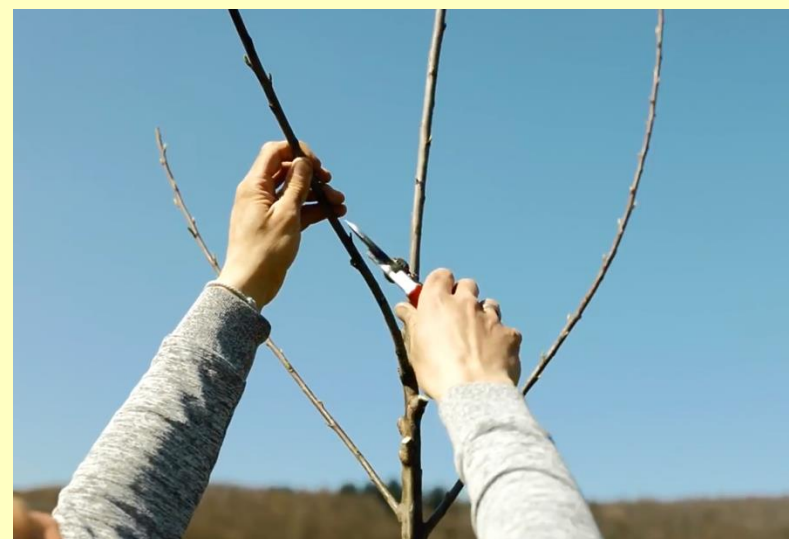

The fruit-tree is grafted onto a rootstock . Put the tree into the planting hole.
Make sure the grafting point is above the later surface .
The tree stands to the west of the wooden post

Tie the tree to the wooden post and attach the bite protection

Firm the soil and form a watering ring
Water the tree

NEXT SPRING : cut the spread the branches so that the tree can form a strong crown
